

COUNTRY-SCOPED THREAT HUNT

BUILT FOR IRELAND

This is not a generic brand list checked against Irish entities. It asks what is being aimed **specifically at people in Ireland** — the semi-states, Revenue and welfare, MyGovID, An Garda Síochána, the retail banks, the ports and airlines, and the payment rails Irish consumers actually use. Detection ran on **rendered page content, not domain names**.

01 KEY JUDGEMENTS

HIGH **Ireland is being targeted with Irish-specific pretexts, not generic ones.** The largest campaign impersonates eFlow and the M50 toll — a barrier-free system that exists nowhere else and that every Dublin motorist is conditioned to pay online after the fact. These require local knowledge to build and local familiarity to fall for.

HIGH **Most of it is invisible to domain monitoring.** 36 of the 45 live findings carry no brand token. The Irish Ferries typosquat cluster is the exception that proves the rule — name-based logic finds those seven and essentially nothing else in this report.

HIGH **Detection was available immediately.** 124 of 151 findings with a registration date were observable within **24 hours** of the domain being registered.

HIGH **Batch registration is the reliable operator signal.** Weekly same-day bursts appear across the toll, storefront and investment-fraud campaigns alike — far more dependable for attribution than hosting, which is commodity shared infrastructure throughout.

MODERATE **Exposure persists.** Median time live is 16 days; the longest-running is 211 days, with 11 findings past 90 days.

02 FINDINGS BY TYPE

FINDING	DOMAINS	LIVE NOW	MEDIAN DAYS LIVE
M50 / eFlow toll fraud	70	12	40
Invented-brand storefront network	25	17	10
Banking credential phishing	15	2	70
Fake Government of Ireland schemes	15	5	0
Investment fraud — BitKeltTrade	12	2	165
Irish Ferries typosquats	7	1	75
An Garda Síochána impersonation	3	0	0
An Post / parcel & customs	3	1	150
Utility impersonation	2	2	168
Airport impersonation	2	1	18
NCT / RSA impersonation	2	1	197
Irish brand storefront abuse · Airline	2	1	8

03

FINDING 1 — M50 AND EFLOW TOLL FRAUD

Seventy domains impersonate eFlow, operator of Ireland's only barrier-free toll. The lure works because the real system genuinely requires drivers to pay online by 8pm the following day or incur a penalty — so an unexpected "unpaid toll" message is entirely plausible to an Irish motorist.

Tier 1 — payment capture

etoll-online[.]shop, roadregistrations[.]com, eflow[.]blog, efloww[.]info, mtoll-n50[.]cyou collect a **vehicle registration number** and route to a checkout.

The registration number is the key: it is exactly what the real system uses to identify an account.

Tier 2 — SEO funnel

"Irish Toll Roads Guide" and "HighwayRoad Ireland" pages — highwayroadireland[.]com, roadirishhighway[.]com, infom50[.]com, dublinroadtoday[.]com — built to rank for M50 toll searches and feed the payment pages.

Operational consequence. Registration is batched — four domains on 18 March, two more on 16 March, all serving near-identical "M50 Toll Guide Ireland" pages on novelty TLDs. **Taking down payment pages without the SEO funnel that feeds them will not reduce victim flow.**

Longest-running, still live on 1 August

DOMAIN	SERVING	REGISTERED	DAYS
m50tracker[.]com	M50 Toll Tracker — Never Miss a Toll Payment	2026-01-02	211
m50-eflow[.]com	m50 eflow Resources and Information	2026-01-08	205
toll-flow-m50[.]com	521: Web server is down	2026-01-13	200
etoll-online[.]shop	eToll Ireland — Pay Your M50 Toll Online	2026-04-22	101
roadregistrations[.]com	Pay your M50 toll online M50 Toll Pay	2026-06-30	32
eflowrentals[.]org / [.]net / [.]com	Eflow RV Rentals	2026-07-26	6

04 FINDING 2 — FAKE GOVERNMENT OF IRELAND SCHEMES

Two distinct government-impersonation campaigns, both exploiting **real Irish policy**.

Electricity Costs Emergency Benefit Scheme II

Six domains serve a page titled "*gov.ie — Electricity Costs Emergency Benefit Scheme II*": `govie-services[.]com`, `gov-qualify-ie[.]com`, `scheme-gov-discount[.]com`, `gov-electricbenefit26-ie[.]com`.

The scheme named is **real** — a genuine Irish government electricity credit. The campaign has run continuously since January with fresh domains registered across five consecutive months: the signature of an operation being **actively maintained**, not fired once.

Fabricated "State Investment Platform"

`the-irish-independent[.]com`, `the-irish-news[.]com`, `irishreportnews[.]com` announce a state investment platform that does not exist.

Note the mastheads borrowed: the *Irish Independent* and *Irish News* are real newspapers. A related domain, `lrishnews[.]com`, replaces the capital I in "Irish" with a lowercase L — a homoglyph essentially indistinguishable in most sans-serif fonts.

05 FINDING 3 — AN GARDA SÍOCHÁNA RANSOM SCAREWARE

Three domains impersonate the Garda National Cyber Crime Bureau to extort cryptocurrency.

`iepaolestp[.]cyou`, `ieaccslittlegirls[.]cyou` and `ieaccslittlesgirls[.]cyou` serve a page headed "*Garda National Cyber Crime Bureau — An Garda Síochána*". The page contains browser-locking behaviour, accusations of child-related offences, and Bitcoin payment instructions. **Two of the three are byte-identical at 230,749 bytes** — the same kit deployed twice.

This is police-impersonation extortion, and it is materially more harmful than credential theft. It relies on shame to stop the victim reporting it, and it uses the name of the national police service to do so. The domain names themselves are chosen to make a victim believe the accusation is substantiated. All three were registered in January 2026 and detected within days.

06 FINDINGS 4-7 — STOREFRONTS, BANKING, INVESTMENT FRAUD, FERRIES

Invented-brand storefront network (25)

Machine-assembled names — two syllables plus a retail noun: `terogoods`, `palengoods`, `jolenlife`, `orinnest`, `divolving`, `zerakitchen`, `kirogarden` — paired with interchangeable copy ("Quality Homeware Choices for Modern Irish Homes").

Arriving in **weekly same-day batches**: ten on 26 July, six on 21 July, four on 22 July. All run WooCommerce. **None displays a Companies Registration Office number**, which a business trading in Ireland is required to show. Separately, `barrysteaoutlet[.]shop` impersonates Barry's Tea with Stripe and PayPal checkout.

Retail banking credential phishing (16)

PTSB — the online service is branded *Open24*, and the campaign uses it directly: `open24-ptsb[.]com`, `open48-ptsb[.]com`, `open24-ieservices[.]com`.

Bank of Ireland — `365secure-alerts[.]com`, `reviewboi-attempts[.]com` and `business-online-ie[.]com` serve "Login — Bank of Ireland" and "Business Banking". The real service is *365 Online*, so "365" is the brand — and it is also one of the noisiest strings on the internet, which is exactly why domain-based monitoring struggles here. **Note:** `365online.com` is Bank of Ireland's own genuine service and has been excluded (§07).

AIB — `aibonl[.]net`.

Ryanair / BitKeltTrade investment fraud (12)

Twelve domains carry "*Michael O'Leary, Ryanair CEO, presents BitKeltTrade*". Ten were registered in a single burst between 8–10 February under a rigid generated pattern — `brightleafmanual`, `bluestepguide`, `quietshoreupdate`, `clearpinechannel` — each an adjective, a nature noun and a media word.

This is the **Irish arm of a wider operation across nine European countries**, using the same kit, platforms and batch-registration behaviour. Ireland's variant uses the most recognisable Irish business figure available.

Irish Ferries typosquats (7) — the control case

Seven domains with single-character manipulations — `irirshferries`, `irishferrries`, `irisshferries`, `irish-ferrles` (an `r→l` substitution).

This is the one cluster conventional typosquat monitoring would have caught, and it is included for exactly that reason. The contrast with the other six findings is the point.

07 DETECTION QUALITY — WHAT WAS EXCLUDED

Ireland produces an unusually high collision rate, because several national brand names are ordinary words elsewhere. These entities were removed **in full** rather than filtered quietly.

ENTITY REMOVED	REASON
Luas	Means "wide/broad" in Indonesian — hits were Indonesian gambling and slot-SEO pages, not the Dublin tram network
Eir	The Spanish nursing-residency exam (<i>Enfermero Interno Residente</i>) and a Norse goddess
HSE	International abbreviation for Health, Safety and Environment — occupational-safety consultancies
Irish Rail / DART	Collides with the game of darts, Google's Dart language, and dart frogs
Revenue	An ordinary business word; hits resolve to HMRC, the US IRS and revenue-management SaaS
Energia	The ordinary word for energy in Italian, Spanish and Portuguese
Irish Immigration	"Inis" is Irish for island — hits were Aran Islands tourism
Credit Union IE	Overwhelmingly United States credit unions
365online.com	Bank of Ireland's own genuine online banking service. Removed on review — it was initially retained because the domain carries no bank name, which is precisely the property that makes "365" hard to monitor. A live-service domain must never appear as a finding

The largest correction. A raw content sweep of the Irish entity list returned **759 domains**, 636 of them with no brand token. Almost none were findings. "Luas" alone produced 143 gambling-SEO pages. **Reporting 636 would have been indefensible.** The figure carried forward is **158**. Individual domains were also excluded after analyst review — including `dpd-parcelwizard.com` (DPD Ireland's own service), `eflowacademy.com` (an unrelated Brazilian training portal) and `aerlingusvacationstore.com` (an authorised holiday partner).

PRIORITY

Refer the Garda impersonation immediately. The three Cyber Crime Bureau extortion domains should go to An Garda Síochána and the NCSC-IE as a priority — this is the national police service being used to extort citizens.

HIGH

Brief TII and eFlow on the two-tier structure. Removing payment pages without the SEO funnel pages that feed them will not reduce victim flow.

HIGH

Notify the Department of Social Protection and gov.ie about the Electricity Costs Emergency Benefit Scheme campaign, which has run continuously since January and re-registers when taken down.

STANDING

Report the storefront network to the CCPC. Twenty-five WooCommerce shops trading to Irish consumers without a CRO number is a consumer-protection matter as much as a security one.

STANDING

Add content-based detection. Domain monitoring correctly found the Irish Ferries typosquats and essentially nothing else in this report.

Scope and sourcing. 77 Irish entities hunted across energy, transport, banking, government and electronic identity, health, postal, telecoms, retail and insurance, alongside a nationwide sweep for Ireland-specific signals — Eircode, PPSN, MyGovID, Intreo, ROS, Garda, M50, eFlow — independent of any brand list. Entities returning no impersonation are recorded as such. All detection used rendered page content from Webamon sandbox scans; **no systems belonging to any named organisation were accessed and no non-public information was used.** Cluster attribution rests on shared page content, batch registration and kit fingerprinting; co-location on shared hosting is not treated as evidence.
